Apoplexy - to p: 385  
Catalepsy - p 385  
Rabidiform 386  
Wagfulus 390  
Spasmi-Tetanus 391  
Hydrophobia 415  
Convulsion - 423  
Chorea - 425  
Epilepsy - 427  
Hysteria - 432.

+ Dr Balthus's & my own facts during  
two periods of public distress from  
war.

— 2d opinion but it was injected in a glyster  
according to Dolus. — Electricity —

# Violent determination of blood from anger  
or long & passionate speaking — as in Cha:  
Meridith — the old German — & Morgagni's  
monk in the pulpit. or empty stomach —  
Insolation — smoking smoke of tobacco —

x It is remarkable that the same causes  
induce palsy — apoplexy — Phrensy — or  
phrenicula, and hydrocephalus in some

according to predisposition. — It remains  
yet to be determined on what difference of action  
in the brain these different phenomena of disease  
depend.

[Painful application of the mind to any one  
 subject whether it be the object of the Understanding?  
 or passions <sup>+</sup> — or it may be induced by <sup>Palsy</sup> Epilepsy, —  
 Ischemia — Anasarca — <sup>worms</sup> Intermittent fever — translated <sup>paroxysms</sup> convulsions  
 Hysteria, or Gout. Perhaps in gouty habits it  
 is always a translation of the <sup>arthritic</sup> ~~arthritic~~ life  
 — fester to the lower. — also fixed air — fumes of  
 lead & <sup>or</sup> — or a contusion — Montaigne's brother — died in 6  
 hours from stroke on his temple with <sup>young's</sup> ball.  
 Its exciting causes are generally violent  
 exercise — long inspiration — great external heat  
 Stoppage of bleeding piles — <sup>or nose</sup> parturition —  
~~phlegmatized & fixed his face~~ breathing in  
 crowded assemblies — Lord Chatham's death from  
 Budge in Scotland — & Budge Henry — fumes of ~~lead~~  
 this cause — intoxication — any indigestible  
<sup>+</sup> matter on the stomach — John Meredith's  
 & Robt Wilson's cases — <sup>vomiting</sup> — wet feet —  
 Tumors on the <sup>which open</sup> ~~head~~ <sup>from</sup> head — long  
 stooping — tight ligatures not only round neck,  
 but — on the feet — Budge Ingersoll's case. Occur  
 most frequently in cold open winter, or in  
 warm springs succeeding cold weather.  
 For much <sup>more</sup> useful information I refer you  
 to Dr Cullen's first lines. E. J. Hall only

*[Faint, illegible handwriting on aged paper]*

H

<sup>24</sup>  
 Add: 3<sup>rd</sup> fitt not always fatal - & first frequently  
 so - 2 Tho' it generally attacks old people - yet  
 I have known it attack ~~young~~ persons in the  
 middle of life. - 3 Obstructed head ache for many  
 years apt to terminate in it. - <sup>great</sup>  
 The disease divides itself into ~~simple~~  
 H morbid & weak morbid action  
~~Defect of action~~ - ~~the first~~ Both known by  
 tense or depressed & slow,  
 the pulse - full - in the first case - weak,  
 & quick in the last - ~~from indistinct~~ distinction from  
 serous & sanguineous. - Both may produce  
 excess & defect of action. - But first - are  
 there no precursors of this disease? Yes.  
 - They are - viz: Giddiness <sup>Headache - drowsiness.</sup> - numbness in one  
 or both limbs - After lying on one side - nightmare  
 from lying on the back - or <sup>the</sup> the neck bent on the  
 sides - <sup>tempers -</sup> frequent hemorrhage from the nose - long  
 absence of habitual, or periodical piles - or  
 Gout - <sup>or false</sup> dull vision or hearing of short duration -  
 sudden darkness -  
 - a fattening of the tongue & loss of memory.  
 - inflation of the face & neck - & fuller respiration  
 than usual <sup>morning</sup> - when these occur w<sup>th</sup> - a <sup>low diet</sup> - admit,  
 or a purgative, often prevent the disease. -

+ Always largest when from falls or contu-  
sions, or any other causes not preceded by  
long debilitating ~~causes~~ predisposition. Dr

# where V.S. can not be used the  
carotid Artery should be pressed with the finger.

This has succeeded in One case in our city.

It is strongly recommended by Dr. Perry.

In cases of weak, or slow pulse, <sup>which</sup> ~~this V.S.~~ is the effect of indirect debility, the V.S. sh<sup>d</sup>.  
be gradual - the smaller the stream the better,  
- it sh<sup>d</sup> now & then be stopped - In this way,  
~~I overcame~~ the indirect debility of all diseases

The foaming of the mouth, & a sweat on the forehead indicate great degree of danger. After-  
-wards supervening is favourable - & why? Cure

Crises of Drops of Blood - known by previous  
predisposition - & above all full, & hard pulse.  
Sometimes the pulse is weak - slow from excess of  
stimulus or impression.  
1 Bleeding. After the defence I made of this remedy,  
in discussing ~~it~~ formerly, I hope nothing further need be  
said in its favor. The quantity shd be large  
according to the cause of the disease & violence  
of the symptoms. <sup>of form</sup> The carotid & temporal  
arteries - also jugulars known? - but this is  
 seldom practicable - Both arms often need  
- cupary at once - For the <sup>workid</sup> ~~scope~~ of action tho'  
violent is of short duration, & unless soon re-  
- moved terminates in death. The position  
of the patient shd be attended to? be seated  
on a chair, or his head raised. - All ligatures  
- to be removed, especially round the neck. - ‡  
I next to vs. - Crises Vomits. are they proper?

is best overcome, (as I hope to show  
hereafter.) Dr Brown has happily advised  
the gradual application of stimuli in  
Diseases, but the gradual Abstraction  
of stimulus is a new principle in  
medicine, from which immense Advan-  
-tages are to be derived in the case of  
all Diseases of indirect debility. V.S. seldom  
proper, when indirect debility has con-  
-tinued two or three hours - the vessels  
by <sup>long</sup> exposure, lose their sensibility, & refuse  
to rise by the Abstraction of stimulus. In  
this respect, they resemble a tree - which  
after being long bent, is unable to raise  
itself to its former erect form.

all Ligatures shd be removed.

Dr. Fothergill recommends them. When from ~~an~~  
~~some~~ <sup>an</sup> offending cause in the stomach, they must  
 be highly useful - They moreover take down  
 excess of action here as in other cases - but  
 this excess is of such short duration - that  
 the vomit sh<sup>d</sup> be given soon, or its dose sh<sup>d</sup>  
 be a very gentle one. I have never used  
 them. When required to discharge the contents  
 of the stomach, it sh<sup>d</sup> be excited ~~only~~ <sup>gently</sup> by a feather  
 3 Ungles - Highly useful - to ~~draw~~ <sup>draw</sup> ~~invite~~ <sup>draw</sup>  
 the blood from the head - They may be ~~used~~ <sup>used</sup>  
 for they seldom exert any stimulus on  
 the whole system. - also Glysters - these  
 may likewise be gently stimulating sh<sup>d</sup>  
 be repeated till all the contents of the bowels  
 are evacuated. -

& pure  
 4 Cool Air - this highly proper - all  
 unnecessary attendants sh<sup>d</sup> be turned out  
 of the room. -

5 & Cold water proper to the head? It is often

Q Can the passions be employed in preven-  
-ting or curing this disease? Yes -  
+ That fear will cure drunkenness infer-  
-red from the fact of the Scots' factors on  
James's River being made sober by  
being carried away by a fresh. in Dr  
+ ~~where apoplexy occurs from~~  
Brethenspoon tells a story of a man  
in Scotland, who when drunk always  
got so angry when he heard any man  
Abuse religion that it sobered him. |

Tended with hiccups in <sup>a tendency to</sup> the dyspnoea from Drunken-  
 ness. — as we witness in boys — & as happened  
 at Baltimore — perhaps — fear acted here with the  
 sedative power of cold water. <sup>yes</sup> — we use it  
 moreover in <sup>violent</sup> ~~cases of~~ action in ~~the~~ phreny.  
 I should not be afraid of it. If useful — in ap-  
 = plexy — from fixed air from charcoal — only from fixed action.  
 If these <sup>remedies</sup> ~~remedies~~ fail, <sup>or if the</sup> the disease <sup>is</sup> ~~is~~  
 be so far advanced that they cannot  
 be used ~~to deficiency of action~~ — & this is the most  
~~for common species~~ — The Remedies <sup>indicated</sup> here

are stimulants. These sh<sup>d</sup> be

- 1 Blister to the head & Neck, or the Actual  
Currency — to the head.
- 2 Acid Cataplasms to the feet. Mustard of the  
 quickest operations. or Common Salt thrust  
 in the mouth.
- 3 Acid Glysters — but not necessarily opening,  
 Unless Costiveness has preceded. —
- 4 Fresh Air — ~~is~~ proper in all cases, but  
 especially in those which occur <sup>from</sup> of the want  
 of it to stimulate the lungs, as from fixed  
 Air,

5 Acrid substances put into the mouth as salt.

6 Electricity.

7 Frictions

8 Light - & perhaps 9 <sup>certain</sup> ~~great & sudden~~ sounds.

[The ~~the~~ four last should be applied gradually in all cases of Apoplexy without much, or any predisposition. The last is illustrated, by our being able to wake a person in a sound sleep by a whisper - when loud talking can make no impression upon them. The reason is obvious.

- There must be a ratio between excitab.<sup>4</sup>

& Stimulus - The excitability here very <sup>in all recent cases</sup> great tho' no excitement takes place. This

ratio is illustrated in many instances as in <sup>or bad</sup> good news - hunger - &c: the neat's tongue. It

extends to the moral & political passions - The convulsions of the French nation owing to <sup>political</sup> ~~liberty~~ <sup>excitability</sup> ~~being too~~ being too great to bear the sudden

& powerful stimulus - The same reason <sup>explains</sup> to the licentiousness of foreigners upon the sub-

- ject of liberty when they arrive in this Country. — But to return —

+ The Symptomatic Apoplexy from other  
diseases is to be cured by removing those  
diseases - If from worms by Anthelmintics  
- If from <sup>or bilious - or yellow</sup> intermitting fever - by ~~leeches~~ - Use of  
~~the other causes~~ <sup>the remedies proper</sup> in each of those  
diseases.

A fever following Apoplexy generally favours:  
= ble. Shows action in the system. I

~~Persons~~ Persons who have had one fit of  
the Apoplexy, are ~~disposed~~ to always pre-  
- disposed to it afterwards. It is of great  
consequence to obviate a return of it.  
The following Directions

Sometimes the remedies that have been  
<sup>or ~~returning~~ the stimulus of the congestion</sup>  
 mentioned, produce <sup>great results</sup> ~~effects~~ of action on the 3<sup>d</sup> or  
 4<sup>th</sup> day. In this case the remedies for taking  
 it down are proper. —

0 Sometimes stupor - drowsiness - <sup>& a</sup> defect  
 of memory <sup>or</sup> follow <sup>a fit</sup> ~~a fit~~ of apoplexy. ~~These~~

Remove these, - and leton - or Caustic should  
 be applied to the neck. — <sup>These are</sup> Many instances  
 of their success, <sup>that you will find one of</sup> ~~but~~ defect of memory caused by it in  
 Vol. 8 of med. essays - by Dr Douglas. —

If all the remedies mentioned sh<sup>d</sup> fail,  
 what should we say to the Trepan? we  
 use it in Congestion from Contusions.

Why not from Other Causes? <sup>the</sup> —

If we come now to Propylaxis of this disease.

If before mentioned the remedies when the  
 symptoms which we before called precur-  
 sors appear. At Other times the following  
<sup>The following</sup>  
 rules or directions sh<sup>d</sup> be carefully attended to,  
 for this purpose.

+ Pulsus have been observed to arise on  
in the morning after going to bed <sup>with an empty stomach.</sup> ~~previously~~  
- the same danger to be apprehended in  
apoplectic habits - in both from a defect  
in <sup>habitual</sup> stimulus, and an increase of  
others - —

would be best supported by lying on a  
hard bed, or a mattress, and lastly by avoiding

3 By Spines - onsetons. The last to be preferred.

Sanctioners speak in high terms of them.

These effects taken notice of them by Dr. An-

-derson. 1<sup>st</sup> regular bowels, & 2 business.

I cannot decide upon them. [return]

# 7 avoiding sleeping with head reclined in a  
Chair. Catalepsy

an inferior degree of apoplexy - not attended  
with falling down - occasioned by obstructed  
circulation or congestion in the brain - pro-  
duced chiefly by gonorrhea fever - melancholy -  
- long protracted attention to one subject -  
The story of Archimedes - sudden frights - un-  
successful love - <sup>First case</sup> Lepius's story - caused by iron -  
- former degrees of the remedies for apoplexy.

Coma Papapoplexy - (no inability to move the limbs),  
Stupor - & Coma - all to be treated as tendencies  
to apoplexy.

Also Anger's story. See to 2. 483  
from Dr. Williams's work. 378

of or lethargic  
Comatose state of fever.

In the beginning should be cured by deplet.  
remedies - After the system is weakened,  
by tonics.

✓ Chiefly from fevers, particularly those  
of a malignant kind. It occurred in  
several cases that came under my notice  
in the yellow fever. I suspect our patient  
arose from it. <sup>Both species</sup> It occurs after  
many complaints of the bowels, particularly  
Colic & Dysentery. <sup>They</sup> Sometimes succeeds  
<sup>Hysteria</sup> Gout & Rheumatism. <sup>Palsy</sup> It is divided 1. As  
it affects the head only. 2. As it affects  
the muscles & nerves of one side only. In this  
case it is called Hemiplegia. 3. As it affects  
the lower extremities - In this case it is

# Palsy

✓ Certain voluntary motions only diminished in their action - often with Sleep! -

It is Idiopathia de symptomatica. The  
It depends on general debility.

first - is a general disease ~~It affects~~  
either a part - portion of or one half the

the whole, - as the tongue - or one side.

In the last case it is called Monoplegia.

~~The paralytic~~ It arises from  
also mineral exhalations

all the causes of apoplexy. It often precedes,  
especially head - sun - stroke, &c.  
or follows apoplexy. - The ~~paralytic~~ symptomatic

arises from ~~typical~~ causes acting ~~on parts~~

on parts of the body, without the intervention  
of the brain, and often from causes which

do not affect the whole system. The paralytic

- palsy or palsy of the lower extremities

also ~~all the~~ also palsy from Rheuma  
- from is

called paraplegia. & as it affects particular  
parts of the body as tongue - or a single limb.  
- The 3<sup>d</sup> & 4<sup>th</sup> exist independant of an affection  
of the brain. - - =

+ An exception to this in the Bath hos-  
pital in 1776. Out of 64 patients only  
14 were women. All also subject to  
them, but persons beyond 50 most.  
very old people most subject to them in  
cold weather. -

+ Observed in <sup>three</sup> ~~two~~ cases the pulse of the  
affected side to be the most full, and  
tense, <sup>Halliday - Summers - & Kinley -</sup> & in one case - the pain to be  
most acute in the sound arm - In  
the same case there was an involun-  
- tary flow of Urine - which inflamed  
& excoriated the Scrotum. - I have  
observed a disposition to this tears to be very  
common in this disease, likewise a sudden

of this kind I am at a loss to know  
 where to place palsy of the limbs from  
 Dry Belly Ach. Is the affection of the limbs,  
 from sympathy thro' the brain, or from  
 any communication or affinity of the  
 nerves of the limbs, or bowels? If from  
 the former - it belongs to the Idiopathic,  
 & is a disease of the whole system. -

Of the Idiopathic Palsy - Predisposing -

~~The~~ proximate - remote - & exciting causes  
 all the same as apoplexy - Its precursors  
 In most mililar - Diarrhoea - &  
 likewise the same - It affects women  
 Numbers of affected side -  
 more than men - from their more  
 stantary lives<sup>+</sup> It sometimes affects  
 children, but seldom, I believe except  
 from Epilepsy - or Hydrocephalus. - I have

once seen in the night born from typhus  
 It continued only a few days. <sup>also after small pox - Dysentery & Catarrh -</sup> I have<sup>+</sup>

The Remedies - the same as for  
 Apoplexy - having due regard to <sup>the state</sup> ~~cases~~ <sup>tonic cases</sup>  
~~defect~~ of Action. — In ~~both cases~~ <sup>in both cases</sup> ~~purging~~  
 is a most powerful remedy. The purges sh.  
 be ~~used~~ active. I was taught to depend  
 upon them by the late Dr Bond. Also  
 3 nitre & 7 snuff <sup>frictions</sup> - with the hand  
 to be preferred. <sup>In defect of</sup> Action & <sup>more</sup> ~~weak~~ <sup>more</sup> ~~indefinite~~ <sup>to excitability</sup>  
 - tides - may be given with advantage.  
 - also mustard - <sup>cantharides</sup> - horseradish - & other Stimu-  
 - lating vegetables. <sup>of 2</sup> The Cold Bath - may  
 likewise be used in this species <sup>the</sup> in advan-  
 - tage. I once saw it cure where head - &  
 tongue were much affected After previous  
 bleeding - purges - & are issue. <sup>of 2</sup> Violent  
 vaporous ~~trig~~ <sup>trig</sup> sometimes induce palsy, but  
 they likewise cure it. Diemerbroeck saw  
~~light~~ a shock of lightning cure a woman  
 who had had it 38 years. I suppose it

Progress of recovery is - first the  
+ the ~~favorable~~ recovery is - first the  
speech. 3 weeks in ~~the~~ miller -  
Voice - 2 the leg - 3 the arm - 4 the  
muscles of the face. The Understanding <sup>is</sup> affected.  
calls things by false names. They can't read or write.  
Favourable symptoms are - enriching  
feeling like a limb asleep - pain - Un-  
- favourable symptoms - sweating of  
the limb -

to be the fright from the insufficiency of Electricity (which is the same fluid) in this disease, also from the effects of frights in other cases — I have heard of the cure of pica in a person in a palsy curing it: & the story of the son of Cressus who was dumb from a palsy of his tongue, <sup>upon</sup> seeing a Persian soldier approach his father to kill him cried out "O homo - ~~inter-~~ <sup>inter-</sup> ~~ferimus~~ Cressum" and cured after obtaining the use of his speech. — These facts show the efficacy of stimulating pisions, but the application of them requires great caution & judgment. — +

In the prophylaxis - If tremors <sup>only</sup> attend ~~the~~ <sup>the</sup> disease - to be disused, especially in Druff which procures the least discharge. Dr Franklin & his son Pringle's facts. —

v ~~Indians~~ men are most subject to  
it. It was the disease of the celebrated  
Ruspean for many years before he  
died. —

vi — cured Mr Brant in one night.  
also Mr Prager from Debt —

The palsy of the limbs from Colic - to be cured  
by acid & stimulating ~~cataplasms~~ applications  
to the bowels. Often effectual - when all  
other remedies have failed. The local  
palsies - will come in under the class  
of local diseases. ~~Does~~

of Wahagutness -

~~From too much or too little stimulation to  
the brain - whether applied or not to the~~

~~Artificial or nervous hysterics.~~

the Remedies are . 1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100.~~

~~2 opium - 3 Asafetida . 4 equal excitement to  
the whole system - by getting out of bed & walking  
across the floor . 5 Thinking on one subject .~~

~~Thinking of a waving wheat field -  
counting 100 backwards - 6 a gentle noise  
of a flash of sheep jumping a fence -  
from falling of water - humming of bees  
7 Light - hence many people drop asleep  
at daylight .~~

## Spasmi

I define them to be <sup>"</sup>~~excessive~~ irregular motions in the muscles, or muscular fibres" By irreg-  
<sup>I mean violence - frequency & duration w<sup>ch</sup></sup>  
~~clarity, & manner~~  
 are preternatural in muscular motions.  
 All ~~spasms~~ <sup>preternatural motions</sup> are divided into clonic & tonic. The  
 first alternated with relaxation - the last con-  
 =stant. The first has rec<sup>d</sup> the name of Spasm  
 - the 2<sup>nd</sup> - Convulsion. - Pain - caused by  
<sup>asphyxia</sup>  
 distention - ~~asphyxia~~ - & Spasm. -

## Tetanus

"Rigidity of the muscles of the a part or of the whole of the body, <sup>accompanied by</sup> ~~especially of the~~ a contraction of the lower jaw, & occasional convulsions"

It includes <sup>Emprosthotonos</sup> ~~Opisthotonos~~ - & Trismus - The  
<sup>Backwards is a</sup>  
<sup>Opisthotonos - or</sup> ~~Emprosthotonos~~ <sup>symptom</sup> ~~for a part~~ of it, but it seldom  
<sup>lasts</sup> ~~for a part~~ of it, but it seldom  
 occurs. I have seen it in Miss Knight.  
 She was <sup>remote predisposing</sup> ~~disposed~~ blind with it from tight shoe.  
 Its ~~predisposing~~ <sup>remote</sup> cause is debility. This  
 I infer from its remote causes which are

+ It was remarkable that some of the  
french troops who had spent a winter  
in Rhode Island, <sup>during the late war</sup> were affected with locked  
jaw from wounds at the Siege of York  
town - while many of the french soldiers  
who had just arrived from the West Indies  
suffered from that <sup>case</sup> ~~disorder~~. This is an  
additional proof of its depending on predis-  
posing debility. -

Why <sup>is</sup> morbid excitement deter-  
-mined to jaw - <sup>Answer -</sup> the muscles of it  
night & day except when chewing  
are always <sup>here</sup> - they are  
relaxed, - always in a state of in-  
-viting debility.

of extreme heat in its debilitating degrees - and  
 great fatigue - hence it occurs chiefly in hot  
 climates or hot weather, & after great labor  
 or exercise of body. & As a further proof of its  
 depending on debility, I must add that it is Dr.  
~~its exciting causes are~~

Bispet takes notice of its occurring chiefly in  
 a part of the Island where intermittents are  
 most common. Now Intermittents - we are  
 sure depend upon <sup>debility</sup> debility.† -

Its exciting causes are

1 Wounds - It is not necessary that a tendon  
 sh<sup>d</sup> be injured, or half divided as some  
 have supposed, to produce Tetanus. It follows  
 wounds of all kinds - even amputations.

It is more common after gun shot wounds  
 than others - from two reasons: 1<sup>st</sup> from their  
 being preceded by fatigue, & 2<sup>ly</sup> from the  
 contusions which sometimes attend  
 them not disposing <sup>them</sup> to inflamm<sup>n</sup>:- for  
 where Inflamm<sup>n</sup> is in a natural degree

he saw this disease  
+ DeLark says from a fish bone sticking  
in the throat, <sup>also from</sup> the sting of a wasp on  
the Glans penis in a negro in Dominica.  
Two instances from Drawing teeth. \*

The  
time between the injury to the body  
is from <sup>one day to</sup> six weeks ~~the~~ <sup>the</sup> next day Dr  
Culpeper <sup>says</sup> next day from a negro stum-  
ping his toe - died the 3<sup>rd</sup> Mr Weston;  
2<sup>nd</sup> day. my son John 2<sup>nd</sup> day. Slight  
wounds produce it - as cutting a  
nail & corn too closely, & I saw  
in 1791 July, a case in Jersey for in a  
young woman from too tight a  
shoe abrading the skin of one of  
[a mol. woman in 1798] great lites &  
her toes. & a wound in the forehead on  
a negro boy only  $\frac{1}{8}$  of an inch - died tetanic next  
day - putrefaction immediately ensued, ~~was~~  
to prevent Dissection. Dr Hahnemann. D in Hydro-  
cephalia.

Incurs a wound, I believe no One ever  
 saw a tetanus. — The tetanus sometimes  
 occurs after the healing of a wound - proba-  
 bly from some <sup>foreign</sup> irritating matter being  
 retained in it. I have seen two cases of  
 this kind - One six weeks after the wound  
 was seen? — The late Dr Monro mentions  
 a case of the same kind - in a man who  
 had walked too soon upon a bone that  
 had been broken! Phy: & Lit: Ep: Vol: 3.  
 The cutting the navel string - Sometimes a cause.  
 The 2<sup>nd</sup> ~~existing~~ cause is - the application  
 of cold - after the body has been heated, &  
 debilitated by heat & labor. Hence it often  
 occurs from sleeping in the open air  
 after a hot day. A tendency to Tetanus  
 occurs from the <sup>head</sup> ~~neck~~ being exposed to  
 a current of air <sup>from a door or window</sup> in a warm room. The  
crick in the head as it is called is the  
first symptom, & of course a low

+ Dr Hunter mentions trismus or  
lockjaw as a common symptom of  
bilious fever in Jamaica.

I have heard of <sup>Trismus (one of its symptoms)</sup> ~~its~~ occurring after

drinking cold water. Dr Bartram

✓ but the most remarkable act of  
the effects of cold in inducing the  
discurus are to be met with in  
Dr Girdlestone — p: 1 — 2-3 &c in  
vol. II of pamphlets. —

degree of tetanus. I have seen it frequently  
 in summer, & once ~~from~~ <sup>accompanied</sup> ~~by~~ with  
 bilious fever, from sleeping with ~~under~~  
~~a window~~ in a current of air during a  
 moon bright in a summer month. +  
 The cold seems to act upon the highly sensitive  
~~the system~~ <sup>increasing the</sup> ~~by distorting the~~  
~~of the system~~ <sup>of the system</sup> ~~propagation~~. The principal matter is  
 the stimulus <sup>or</sup> ~~the system~~ <sup>by</sup> ~~increasing the~~  
~~disturbance~~ <sup>by</sup> ~~increasing the~~ debility  
 produced by excessive heat & labor } Hence  
 arise - the spasms - for "Atonia Gigrit Tremor" is an  
 The 3<sup>rd</sup> <sup>aphorism in medicine</sup> exciting cause is error. Of this  
 several instances have ~~occurred~~ <sup>ing</sup>  
 this city. It was once said Tetanus was  
 epidemic in Philad<sup>a</sup> - from five persons  
 having had it in the course of a few  
 weeks. It is an uncommon disease,  
 & when it occurs is much talked off.  
 - The apprehension of it begets terror

+ a case communicated by Mrs Claypoole  
of a man affected with Tetanus from  
seeing a ~~boy~~<sup>girl</sup> tread on a nail.

in the mind of every person who has  
 been exposed to a predisposing, or exciting  
 cause of it - hence ~~where~~ it spreads from  
 a cause that would not otherwise pro-  
 duce it - viz: fear. But I have once  
 known it be produced by a fright upon  
 a healthy man - a brewer - ~~where~~ <sup>in</sup> whom  
 there was <sup>no</sup> other exciting cause. It was  
 in warm weather & probably after he had  
 been fatigued w<sup>th</sup> watching <sup>or labor</sup> of the tetanus  
 a 4<sup>th</sup> exciting cause, is acid matter in the  
 alimentary canal. The meconium ~~is~~ <sup>is</sup>  
~~is~~ said to produce it in young children.  
 - The heat of the rooms in which these  
 children are born or lie, predisposes to it in  
 all seasons - for it occurs chiefly among  
 the negroes in little cabins in the West  
 Indies, & among the poor Germans in  
 this country who cook - sit - sleep &  
 bring children into all the world all

+ 5 It has been induced by eating Them-  
-lock Dropwort on 12 Soldiers. It acts by  
inducing debility. Dr. Barton  
also by the *Batura Stramonium* in  
- some British Soldiers in New Jersey who  
eat it for greens. —

6 <sup>th</sup> Parturition - Mr. Sargent.

7 8 very late excellent friend & pupil Dr.  
Bartolam informed me that he had once  
seen it brought on by a draught of cold water  
when the body was very warm.

8 9 I have seen a case of complete  
Tetanus from Hysteria. Rev. Mr. Loomis.  
It occurs from Gout & Worms, Morgagni says

in One

room, & that generally heated by a  
 stove. That the meconium is <sup>the</sup> cause  
 of it, I infer - from its being prevented  
 & in all cases - by giving a gentle purge  
~~soon~~ to a child born under the above  
 circumstances, & immediately after its

birth ~~Two~~ cases of Trismus - from drawing teeth  
 which ended in tetanus. Often occurs without it. It  
 men are more subject to this disease  
 than women - & robust men of a middle  
 age - more than delicate or old men. —

[Its proximate cause is "excess, <sup>or deficiency</sup> of  
 action in the nervous system": I say the  
nervous system - for the arterial system  
 is seldom affected in this disorder. On the  
 contrary, Dr Chalmers says the pulse in  
 some cases beats only 40 strokes in a mi-  
 nute. — For the history see Dr Cullen & Dr  
 Lining.]

If before shown in ~~see~~ how many  
 instances the nature <sup>after previous debility</sup> produced action that  
 was overproportioned to the injuries which

that he has seen it on one side of the body,  
without affecting the other.

<sup>12</sup> ~~Intermittent~~ <sup>Intermittent</sup> ~~fever~~.  
12 The bite of a mad dog. The difficulty of swallowing  
is occasioned by it. Goto p: 409. =

of a common size, & ordinary strength,  
+ a man in France lately eat <sup>his</sup> of  
garlic which in a few hours  
produced such a degree of raging mad-  
ness that eight <sup>men</sup> could not hold him.  
- He died in two hours from the  
commencement of his madness. But  
further, an actual experiment has  
discovered that the large tendon in the  
hind leg of a horse which answers  
to the tendo-Achilles in a man is  
able to sustain four times the weight  
in a living horse, that it will <sup>bear</sup> after his  
death without being ruptured. -

~~After previous~~

affected by ~~but~~ in this debility. But  
 we behold in this disease, a more ex-  
 traordinary phenomenon. We discover not  
 only excess of action, but preternatural  
 strength, or excitement. This appears not  
 only in tetanus, but in Hydrophobia.  
 - madness, and in certain convulsions.  
 - From whence is this <sup>great animal</sup> strength or excitement  
 derived? & how shall we reconcile it  
 with our doctrine of predisposing debility  
 in all general diseases? — The question  
 I own is a difficult one. The fact I am  
 sure exists, viz: of ~~previous~~ excessive strength  
 as well as action succeeding previous debility,  
 and ~~it~~ cannot be invalidated, if my explana-  
 -tion of the cause of it should not be  
 satisfactory. I shall however attempt  
 it. I begin by observing  
 1 That that there <sup>is</sup> a great degree of simplicity,

& uniformity in all the Operations of Nature. — Hence the knowledge of One of them, has so often lead to the discovery of Others. —

2 There is a wonderful Analogy between the Operations of the body & mind. Eg: Excessive grief sometimes <sup>goes beyond</sup> ~~expresses~~ tears — so a violent blow sometimes goes beyond sensation. — These two propositions being admitted, I go on to ~~observe~~ <sup>take notice</sup>, that Chemistry has lately taught us that <sup>fire</sup> ~~heat~~ may exist in a latent or quiescent, & in a sensible state. In its latent state — it ~~has~~ wants both heat & light (two of its essential properties) but its existence is as certain as in burning wood, <sup>in</sup> ~~a solid body~~ or melted iron. There is fire in <sup>a</sup> cake of ice & in a quiescent state to set fire to a City — & ~~the fire~~ <sup>in the</sup> Ocean to consume the ~~sea~~ globe were it <sup>not</sup> constantly restrained in its quiescent state by an Almighty

+ There is in <sup>many</sup> ~~all~~ animals latent, and  
fensible or visible life. Life is a latent  
state in all those animals which pass  
~~the~~ <sup>the</sup> winter in sleep. Its duration  
in this quiescent state has not as  
yet been ascertained. Dr. Walker of  
Edin<sup>r</sup>. once saw a ~~rod~~ cut out of  
stone which had been <sup>part of</sup> the founda-  
-tion of a house <sup>which</sup> has stood 300  
years. As soon as it came into con-  
-tact with the air, its latent life  
became sensible, for upon being  
cut in two pieces, ~~it~~ each piece perished  
with strong marks of convulsion. It would  
easy to multiply similar proofs of the ex-  
-istence & duration of latent or suspended  
in the seeds of vegetables - but we shall  
revert to analogies more connected <sup>the</sup> w: our subject.

Sound. — But again +

In the human mind, we behold many instances of latent or quiescent powers. —

1 we behold the Understanding invigorated, & unfolding secret & astonishing powers — Under the influence ~~of~~ <sup>1<sup>st</sup></sup> of certain exhilarating liquors, especially if they be accompanied by agreeable & cheerful company. 2 ~~by~~ <sup>of</sup> the ~~certain~~ <sup>certain</sup> stimulating passions. Who has not ~~heard~~ <sup>heard</sup> even the weakhearted man — eloquent & even sublime — when speaking under the sudden impulse of anger? 3 Under the influence of the great & sublime objects of a future world. — I have taken notice of this fact in the essay upon the effects of physical causes upon morals, but I shall now descend more particularly into a detail of it. — I find I am not singular

in taking notice of the uncommon elevation  
of the Understanding in the hour of death.  
It has been supposed to extend to the prediction  
of future events. Hence we find  
Menophon makes his Cyrus declare in  
his last moments that "the Soul of man  
at the hour of death, appears most divine,  
& then foresees something of future events"

Homer makes <sup>the dying</sup> Patroclus predict the death  
of Hector, and <sup>and</sup> the dying Hector when ex-  
piring with his wounds to predict the fate  
of his conqueror Achilles. nor is this all.

The poets bear testimony to the same opinion.  
— The poets bear testimony to the same opinion.  
A Latin poet, <sup>who writes on the immortality of the soul,</sup> has the following pithy expressions.

"Nam ubi torpescunt Artus, jam monte  
propinqua. —

"Acrior est animus tum mentis."

Shakespeare makes one of his dying  
hero's say in the play of Henry the 5<sup>th</sup>

"O! I could prophesy —

"But that the caitiff, cold hand of death,

"Lies on my tongue —

If Milton in express terms says

" Old experience does attain,

" To something like ~~the~~ prophetic strain.

I should <sup>not</sup> have ~~should~~ enumerated so many  
~~illustrations~~ Authorities for the opinion I have  
 advanced, ~~that~~ but that I am disposed to  
 believe that - ~~all~~ even the Spirit of ~~the~~ prophecy  
 is the effect of a ~~supernatural~~ power, or  
 principle acting upon a predicting power  
 naturally inherent in the human mind.  
 - I am led to this opinion by observing of  
 men of great understandings to possess this power  
 in ~~the~~ a prominent degree in <sup>all</sup> human  
 affairs, ~~more especially in political events.~~

I see behold the memory ~~under~~ ~~circumstances~~ unfolding a latent power un-  
 der the influence of, <sup>intoxication</sup> ~~the delirium of~~ I

Once knew a young man in the College  
 of Edin<sup>g</sup> who had <sup>been</sup> taught to speak the French  
 language when a ~~boy~~ <sup>boy</sup>, but who had so

intirely forgotten it, that ~~that~~ he could not connect two sentences of it together till he was drunk, when he spoke it with ease & fluency. <sup>ly</sup> Latent memory is rendered possible, by the influence of delirium. The Countess of Laval was suckled by a welch nurse from whom she learned to speak the welch language. - After she became a woman she was seized with a fever attended with delirium, in which she spoke a language which was wholly unintelligible to her family. - An old welsh woman coming to see her, understood perfectly every word she said, & entered into conversation with her. When she recovered, she had no remembrance of what had passed, & could not repeat a single word of her long dormant

+ 4 latent memory is <sup>excited by</sup> ~~aroused~~ dreams.  
- hence we often ~~do~~ have the most vivid  
~~impressions~~ ideas  
~~ideas made upon our~~ minds of persons faces  
& events  
~~to~~ ~~as~~ things, of which our memories in a  
waking state had lost the <sup>entire</sup> recollection.

Welsh language. 3 latent memory is  
 awakened by madness. I know a man in  
 this city who spent three years in learning  
 the latin & greek languages within the  
 walls of this house — He afterwards  
 spent 6 years in an apprenticeship to  
 a watch maker & 6 more in close ap-  
 -plication to his trade, during all which  
 time he never once, ~~it is that~~ <sup>we</sup> his M<sup>r</sup>.  
 opened <sup>we</sup> to his knowledge, - looked into a  
 latin or greek book. Twelve years after  
 he left school, he lost his reason, and  
 with it the remembrance & or connection  
 of all his former ideas, except — of the latin  
 & greek languages. These — he reads the day  
 he applied himself to them with as much  
 facility as when he left the latin & greek  
 School. They, are now his only amusement.

*[Faint, illegible text, likely bleed-through from the reverse side of the page]*

*[Faint handwritten mark or signature]*

5<sup>th</sup> ~~The~~ latent memory is awakened by the changes which are produced in the brain by old age - hence the accuracy & fidelity with which <sup>old people relate</sup> they ~~relate~~ the most trifling events of their childhood - and which had slept in their minds for 50, or 60 years - Unknown even to themselves. —

3<sup>rd</sup> ~~ly~~ we observe latent strength, converted into visible strength in the passions. — Hence we sometimes see old maids & bachelors sometimes discover such degrees of extravagant love, as much more of a convulsion - than of nature in the mind. Latent compassion has often been awakened by sudden distress in the most obstinate & cold hearts - & even <sup>latent benevolence</sup> generosity <sup>sometimes drawn a single breath</sup> has ~~arisen~~ <sup>arisen</sup> beneath the heavy weight of immediate aversion, & vented itself in a convulsive act of charity. Towards whom

impelled by unavoidable danger, <sup>often</sup> develop  
 the highest degrees of Active Courage. Many  
 other instances might be mentioned of  
 convulsions in the passions <sup>which</sup> ~~from~~ indicate  
 degrees of Strength in them, which they were not  
 supposed to possess. —

But I will go further, & <sup>mention</sup> ~~say~~ ~~as before~~  
<sup>often</sup> that we observe extraordinary instances of  
 latent strength converted into sensible strength,  
 in a healthy body. What wonderful instances  
 of Strength are recorded in persons who have  
 escaped from desperate battle, or ~~in~~ in prisons  
 by fighting, — swimming — lifting weights & the  
 like? I know a <sup>a lady</sup> ~~person~~ in this city who  
 passed a whole week with only an hour  
 an hour's sleep, while her husband lay  
 in extreme danger of death. As soon as  
 he recovered, she sunk into extreme debility  
<sup>which</sup> terminated in an inflamm<sup>y</sup>. Angina.

These different states of the human body, have been called by modern physiologists excitement & excitability. Sensible strength is the former - latent is the latter. Perhaps it would be proper to distinguish the different states of the human mind that have been mentioned by the same names.

A certain <sup>between</sup> ratio of excitement & excitability is necessary to the ~~an~~ perfect health of the body, & the presence of both is necessary to health. But they are often <sup>an unhealthy</sup> in ~~an unhealthy~~ proportion to each other, & sometimes there is a total absence of one of them.

Eg: In the Tetanus, there is in the ~~beginning~~ first stage of the disorder, an excess of excitement.

with a great diminution of excitability.

- This is proved by the <sup>defect of excitability</sup> difficulty of moving the stomach by vomits, or the bowels by

purges. The excitement is greater in the mania,  
 & the excitability still less - hence the great  
 patience of maniacs of heat - cold - & pain from  
 all causes, & hence too the difficulty of moving  
 their bowels with purgative <sup>medicines</sup> ~~phosphorus~~. In the  
 Hysteria & Epilepsy - there is a <sup>deficiency</sup> of  
 excitement, & ~~there~~ an excess of excitability  
 hence the facility with which patients, <sup>in these diseases</sup>  
 are moved by sound - smells - heat ~~the~~  
 cold & the like. I mention these facts  
 only for the sake of asking a <sup>few</sup> questions.  
 - Is there is not in certain diseases a  
 transmutation or conversion of excitement  
 & excitability mutually into each other?  
 - May not <sup>the absorption of camphor</sup> ~~excitability~~ ~~be the cause~~  
 of excitability, be the cause of the great  
 excitement in the beginning of tetanus,  
 & in tonic mania? - and may not the  
 excitement of the system ~~be~~ pass away

into excitability in the hysteria, & the  
 Epilepsy<sup>2</sup>. — and may not excitement  
 & excitability be in the animal body  
 what latent & invisible heat are in wa-  
 -ter? — or to use a more familiar illus-  
 -tration — may not excitement be to  
 excitability what water is to ~~latent~~ vapor.  
 — The first is incompressible by ordinary  
 force, — the 2<sup>nd</sup> is compressible — <sup>or</sup> ~~compressible~~ <sup>movable</sup> ~~by~~ <sup>moving</sup>  
 by the slightest causes. — If this illustra-  
 -tion <sup>be</sup> admitted, then we shall find no  
 more difficulty in <sup>conceiving</sup> ~~accounting~~ for the  
 conversion of excitement into excitab<sup>l</sup>  
 or the reverse,  
 than we do in accounting for the con-  
 -version of water into Vapor, or Vapor into  
 water. —

I have only to add upon this subject,  
 that there ~~is~~ <sup>are</sup> ~~diseases~~ <sup>cases</sup> in which both  
 excitement & excitability are diminished

the wound  
+ If it <sup>th?</sup> have healed, it should be  
opened, or a canstic, or <sup>or fuint.</sup> of cantharid.  
blister, &c.  
be applied to the spot where the wound  
was received. In Capt. Blun's girl the  
Scar opened, the instance she felt the  
knife in making the incision. Dr  
Gellespie <sup>in the west</sup> says he never saw Tetanus  
Judges  
after the use of Liniment to a  
Sore or wound where it is often  
applied. ~~Verid.~~ Journal.

in nearly equal proportions to each other  
as in the nervous fever & in the last  
<sup>certain</sup> stage of lingering diseases.

— we come now to the Cure of Tetanus.

And here as in <sup>some</sup> other ~~cases~~ diseases, we  
find certain premonitory symptoms —  
particularly a pain & stiffness in the  
neck — with sometimes a closing of the  
jaw. In this stage of the disorder, a <sup>small</sup>  
dose of opium — & Bark — & wine often  
cure the disease — especially if it arises  
from a wound, the wound must be  
dressed ~~as~~ & gently stimulated by  
spirit of Turpentine. By this <sup>means</sup> ~~reason~~ <sup>in</sup>  
inflammation is excited in the part  
affected, which is gradually communicated  
to the whole Arterial System, & by its  
<sup>a tone is given</sup> means to the <sup>arterial</sup> ~~nervous~~ system, <sup>excitement</sup> ~~for~~ and  
is qualified —

✓ to ~~excite~~ Abstract the morbid  
excitement from the muscles, it  
is sometimes necessary to render it  
morbid in the blood vessels by ex-  
-citing inflam<sup>d</sup> Diathesis by means  
of stimulants.

# 1<sup>st</sup> V.S. This remedy has lately  
been used with success. I believe  
it w<sup>d</sup> alone cure, if used in the  
same extent that we do in similar  
degrees of morbid action in other  
diseases. 2 Cold. Mr

3. Vomits - They act by Abstracting  
morbid excitement to the muscles  
to the Stomach & bowels. & these  
are more necessary as Costiveness  
generally attends. —

have a solution of the spasms! — If

~~But if these remedies are neglected~~ the  
incipient tetanus occurs from sleeping  
in the open air, or <sup>the</sup> a window open in  
the season of bilious fevers, an emetic  
shd. be given. I think I once prevented a  
tetanus from this cause in a <sup>woman</sup> lady in  
this city. Dr Hunter cured it in Jamaica by  
flourish, mustard & Syrup. —

If these remedies are not administered  
in time, the disease <sup>shd</sup> increase, & appear  
with symptoms of great morbidity to be ~~active~~ <sup>active</sup>  
of nature. ~~What what has been done~~  
in this case? — Remedies - shd. be

~~remedies have been employed with success in~~  
~~the cure of this disease but~~ Dr Hunter's  
~~has recommended sedatives only in it. This~~  
opinion of <sup>this</sup> ~~these~~ remedies is expressed in  
the following words ~~as~~ <sup>as</sup> I recd from a  
gentleman who attended his lectures.  
"were I to be seized with the tetanus

✓ The cold may be obtained any  
where by wrapping our patient  
in wet cloths or keeping him  
in cold water for several hours.  
we thus obtain by the Duration  
of the cold what we want in  
its degree from the want of ice.

~~The want~~

says he, I would if it were possible, throw myself into an ill house, or fly to Nova

Zembla". Besides recommending Cold, <sup>or large doses.</sup> ~~as~~ advised the <sup>use of the</sup> Sugar of Lead ~~was~~ <sup>the</sup> ~~remedies~~ <sup>remedies</sup> imply that he supposed the dis-

ease to be depend on excess of excitement

in the system. But the <sup>efficacy of</sup> stimulating medicines

in ~~using~~ the tetanus prove that it depends

upon debility. Now shall we reconcile the

contrary opinions, & ~~these~~ <sup>these</sup> prescriptions?

I answer, as easily as we

reconcile Bleeding in the beginning ~~of~~ and

Bark & wine in the close of certain fever.

The tetanus like many other diseases

has two stages - viz: <sup>great</sup> ~~excess~~ & <sup>moderate</sup> ~~deficiency~~

of excitement & action. In the first

<sup>sedatives</sup> ~~sedatives~~ indirect & in the last <sup>direct</sup> ~~direct~~ stimuli

are proper. It is from ignorance, or

of cold water,  
[F] out of this from the long application, to the  
warm air. For this purpose - the water should  
not be wiped from his body, ~~nor should~~ & every one  
- sure should be taken to keep him as cool  
as possible.]

[In cases of great morbid excite-  
ment it is useful, & in all cases  
where it appears w: ~~diseases~~ <sup>the</sup> ~~diseases~~ <sup>burns</sup> that  
require relief, to turn over to +  
not other cases it by 6 to 12 bleedings. -

inattention to these ~~stages~~, that both  
 sets of medicines have often failed in  
 this disorder. I believe they have even  
 done harm & in some instances pre-  
 cipitated death. I think I have seen  
 Opium in ~~for~~ do both, when given in the  
 highly excited stage of <sup>excursive</sup> excitement in this  
 disorder] —

The extreme degrees of Cold mentioned  
 by Mr Hunter are proper only <sup>in cases of</sup>  
 great morbid ~~stage of excursive~~ action. They may be  
 obtained - by confining a patient in  
 cold water for several hours, so as effect  
 by <sup>by the duration</sup> ~~the duration~~ of the cold, what can-  
 not be effected by its degrees. Great care  
 should be taken, not to expose our patient after he comes  
 out of the water. ~~It is proper in the case of~~  
 action in this disease? The state of the

with  
\* ~~Instead~~ of Op. I would recommend  
a Vomuit only. I have seen <sup>it</sup> do service in  
two cases, ~~but~~ think I lost a patient last  
Spring <sup>1799</sup> by neglecting it. I gave Stimulants too soon.  
\* as the bowels are generally costive, in  
the beginning of this disorder, they sh<sup>d</sup> be  
opened by gentle Glysters. Dr Cullen doubts  
whether the Costiveness, proceeds from the  
Opium - or from the disease - But I have  
~~lately~~ seen a case which satisfied me  
that it is a symptom of the Tetanus, &  
exists where no Opium has been given.

In a word - Dyslethia in every  
form - by weakening morbid action  
renders the <sup>effects</sup> efficiency of the tonic remedies  
more speedy & more certain. ] -

\* Making Patients Drunk by  
a man in new Eng? - Why? He  
says - the jaw always hangs in  
Dumkiness. -

pulse - the appearance of the blood when  
 drawn - and the experience of the effects  
 of it all forbid it. ~~I think I have seen it~~  
 do mischief. - <sup>violent state</sup>

As the ~~cause of~~ action is of short du-  
 -ration, we <sup>in this distant watch</sup> must attend to the first symp-  
 -toms of deficiency, and prescribe for it the  
 following stimulating remedies.

1 Opium - as the stimulus of this  
 medicine is of very short duration, we  
 must not depend upon it wholly, but  
 administer

2 Bark, & 3<sup>d</sup> Wine in large quan-  
 -tities. Dr Currie of Liverpool cured a  
 man in the Infirmary of that place by  
 giving him near a Quarter <sup>of a</sup> Cask of  
 Madeira Wine. <sup>+</sup> Other stimulating  
 medicines have been given w<sup>th</sup> effect,  
 & the ~~best~~ <sup>best</sup> given when particularly Oil

+ Capt Blair <sup>girl</sup> cured in one day by  
it, & Miss Knight <sup>in Jersey</sup> by one affusion  
only. - In the Tetanus described  
by Dr Girdlestone in India, the  
Cold Bath did harm, but it was  
because the debility induced on  
the system was so great, that  
~~it~~ it could not ~~act~~ react from the  
stimulus of heat succeeding to  
the sedative effects of the cold water.

+ This new practice universally  
successful - mention where except  
in Philad<sup>a</sup> & why? - next Jan fall in Cind<sup>a</sup>

Amber & flour of mustard. They often prove useful when the system has become insensible <sup>from habit</sup> to the action of the opium - bark & wine.

4 The Cold Bath <sup>shd</sup> - used so as to obtain its stimulating effects. For this purpose the patient shd. only be plunged, or have cold water thrown upon him. <sup>+</sup>

5 Mercury - It must be applied early in an Ointment, & given plentifully internally so as to excite salivation. Otherwise it does no service. The inflam<sup>n</sup> excited by the salivation in the throat - mouth &c. is communicated to the brain, thro' the medium of the arterial system. conformable to this principle I shall read Dr Goodenough's. These are several cases of Symptomatic tetanus - from Hysteria -

meth<sup>d</sup> of cure

† I say generally, for it some-  
times occurs in Tetanus, & once  
in Dropsy of the brain. The difficulty  
of Swallowing is supposed to arise  
from association of idea of pain  
excited by it. —

~~Spit - worms - & fever. I have seen  
it from tetanus & fever. There is also a tetanus  
of one side mentioned by Morgagni. They  
all depend upon deficiency of action, & are to  
be cured to tonic & stimulating medicines.~~

Hydrophobia - improperly called  
madness - the reason - seldom impaired  
" or painful convulsion of the ~~throat~~ pharynx  
" from attempting to swallow liquids, and  
" sometimes from the sight of them" generally  
from the bite of a mad animal". +

See for the history of this dis-  
ease see Dr Baerhaave Vol: 11 - p: 164.5 -  
Ed. 2nd. & 3rd. Theor.

The proximate cause is the same as  
Tetanus. -

indirect

Its predisposing is debility induced by  
the remote <sup>or reason</sup> causes of heat <sup>exciting</sup> or previous dis-  
eases -

or  
1.

These are  
Its exciting causes are the poison in-  
-ken into the body from the bite usually of a

✓ It is said further to arise from Thirst,  
in Dogs,  
✓ But this is not true, for in Cairo  
Volney says Dogs <sup>suffer</sup> greatly from Thirst  
~~as well as hunger~~, & yet canine  
madness is unknown in that  
country. The same Observation is  
made by Prosper Alpinus. Perhaps  
Thirst alone may do harm, & be  
harmless when not combined w:  
hunger] -

mad animal - or The animals which in-  
 -fect are numerous - as Dogs - Cats - fowls -  
 -wolves - cows - horses - & even poultry - The  
 most common as being most domestic  
 are dogs & cats. - The symptoms of ap-  
 -proaching madness in a dog are accurately  
 marked by Dr Boerhaave Vol 11. p. <sup>149</sup> & should be  
 carefully remembered not only by every  
 physician, but by every housekeeper. The  
 cause of this madness in Dogs is <sup>said to be</sup> chiefly ~~feeling~~ <sup>animal</sup> ~~feeling~~  
 -ding them too highly with gross food. This  
 but some late facts shew it, - <sup>from a</sup>  
~~is confirmed on every acc<sup>2</sup> for the~~  
 -genuity of Aliment - hence more com-  
 -mon in ~~England~~ <sup>France</sup> than in this country. &  
~~his sensibility & delicacy, & these are better~~  
~~blunted by a full diet~~ <sup>it is said</sup> ~~from being deprived of water &c~~  
 - many controversies abt. what part of  
 a mad animal is infectious - It is said  
 its blood - milk & flesh - . I have heard  
 of an instance of a whole family in  
 Chester town in Maryland feeding on the

+ a gentleman in Maryland Mr.  
Kingold, fed his <sup>th</sup> negroes w: a hog killed  
by the bite of a mad dog without suff.  
from it. -

<sup>ly</sup>  
+ It is a lymphoma of Splanchnic  
Dropsy of the brain. —

body before it exerts its morbid effects. Dr  
 Filson has published a remarkable case of this  
 kind occurring in the wife of a physician in  
 the Delaware state. It ~~has been~~ it is possible  
 it may be from the bite of a mad animal,  
 but from the ~~dis~~ Hydrophobia, being pro-  
 duced by other causes, I have been led to  
 hope for the consolation of mankind,  
 that the prison could not lie so long in a state  
 of inactivity in the human body. —

A 2<sup>nd</sup> exciting cause is <sup>the bright air</sup> ~~cold~~ After great  
 fatigue & heat of body, as Dr. Astruc relates  
 a case of this kind in the first Vol. of the  
 transactions of the Society of Philadelphia  
 in Hispaniola. It was of a negro. <sup>in</sup> perhaps passion  
 added to his debility. —

A 3<sup>rd</sup> Cause is great thirst <sup>at the</sup> impure, and  
 putrid flesh, & lastly, 5<sup>th</sup> worms bred in  
 the kidneys - nose - brain, & even in the  
 intestines, & 6<sup>th</sup> Hysteria. I Butcher - see +  
 mid. Museum.

From the history - ~~and~~ causes of  
 this disease, I am disposed to consider it as

✓ & Mr Ballington in the med. comment:  
takes notice of a pain in the periculis  
vidis occurring in this disease. Now this is  
one of the most pathognomic symptoms  
of Tetanus. — Dr Mosely mentions a  
case of simple tetanus from the  
bite of a mad animal.

419

negly related to Tetanus -  
~~a higher degree, or as good as much so as~~  
<sup>is to</sup> Rheumatism & pneumonia. my reasons  
for this opinion are as follow. The Journal  
of the symptoms are similar. I have seen  
a true Hydrophobia in a tetanus from a  
fractured leg. - & they both occur from the  
same causes - viz: fatigue - heat - vio-  
=lent passion & hysteria - and lastly from  
wounds. I do not deny a poison being  
infused into the wound from the saliva of  
the bared animal - but when I consider,  
how often this disease follows the wounds  
inflicted by dogs who had previously disco-  
=vered no signs of madness - how unavida-  
=bly the poison in cases of real madness is  
often wiped away in wiping thro the  
garments w<sup>ch</sup> cover the wounded parts -  
& lastly when I consider the rough &  
lacerating nature of a dog's tooth & the

+ a ~~biting~~ wound inflicted by a dog that  
answers to Dr B's description is always to  
be suspected. There is seldom danger to be  
apprehended from a dog who barks, before  
he bites. —

+ Their credit founded on false opinion of the  
disease being rec? — Goodman's failed —

✓ ~~The~~ I am aware that the symptom form  
which the disease takes <sup>viz. the dread of water or</sup> its name has been  
<sup>swallowing</sup> ascribed to the poison of the mad animal  
uniting with, the saliva, and irritating  
& convulsing the throat — But I think it  
may be ascribed more properly to an apocriat<sup>2</sup>

of all kinds,

420

& how much they resemble that in-  
strument which most frequently produces  
tetanus. Viz: a rusty nail - I say when I

consider each of these facts, I am disposed  
to believe <sup>& of the wound which produces</sup> ~~that~~ Hydrophobia: is ~~but~~ <sup>many</sup> ~~as~~ cuts  
in ~~cases~~ <sup>cases</sup> ~~out of fear~~ in the same me-

-chanical manner as a rusty nail, or  
any other <sup>oblique &</sup> lacerating instrument cuts  
in producing tetanus. - The fear <sup>ch</sup> follows

the bite of a dog, predisposes to hydrophobia  
much more than a wound from any  
other cause - hence its greater frequency,  
& its more acute & aggravated symptoms.

By <sup>ly</sup> I infer that the diseases are nearly re-  
-lated from their yielding to the same  
remedies. This leads us to the method of

Cure. Many quack med. - but not  
to be depended on ~~for~~ <sup>the</sup> ~~benefit~~ <sup>after</sup>  
~~the~~ After the infliction of a wound (if

of ideas, founded on the recollection of the pain pro-  
duced by the first attempt to swallow a liquid. we  
see similar effects from association of ideas in the  
Stomach. But I have heard of a fact directly in  
point. A prisoner in Germany who had escaped  
from a recruiting party, stopped at a tavern & called  
for drink. while he was drinking he saw the party ©  
& Dr Haysgarth recommends the pouring &  
patient affusion of water from the  
spout of a tin kettle to wash out the  
poison. - perhaps it acts likewise by  
promoting inflamm<sup>n</sup> in the wound. Dr  
Weston relates in the Museum that  
he saw Inflam<sup>n</sup> the wound - and giving  
Bark & wine prevented the disease in  
a negro boy in Jamaica. Two sheep bit  
by the same dog died in two days.

---

© enter the door where he sat, just as he was  
raising his cup of liquor to his mouth. at  
the sight of them - he dropped his cup, &  
fell into convulsions - He was soon removed  
from there, but every time he attempted to  
drink for several months afterwards he

from that cause & the wound sh<sup>d</sup>. be dilated, & inflamed by the same means, & for the same reasons formerly mentioned in the cure of tetanus. - It sh<sup>d</sup>. likewise be kept open. Dr. Folger's fact of the washer woman & gent<sup>l</sup>. from the bite of a cat directly in point. +

Besides this - ~~especially~~ the Cold Bath sh<sup>d</sup>. be used daily - perhaps Bark & wine might be used to advantage. The efficacy of & has been estab<sup>d</sup>. by many facts. It appears to act as in Tetanus: - These medicines - proper to prevent the disease. But if actually - formed - If great cause of action, or evolution of latent strength appears - In Hunter's ideas sh<sup>d</sup>. be realized, & many facts show the efficacy of a long & debilitating <sup>cold</sup> application of water to the body in this disease. - Confining the body under water for a few minutes has in several instances cured

was thrown into similar convulsions - wholly  
from an association of the idea of the tumor he  
felt from the sight of the recruiting party.

+ Dr Sims has lately started a new  
cure for this disorder viz: bathing the  
body with Oil, & pouring down the  
throat in large quantities. Vinegar &;  
ter die has it is said been used with  
success in Italy. -

Besides this 422 Vol. - The fact of  
~~that~~ the disease - ~~is~~ ~~as~~ ~~soon~~ as  
a girl in Buch's County. -  
deficiency of action occurs - all the stimu-  
- lating medicines used for Tetanus sh<sup>d</sup> be  
given - if not by the mouth - by way of  
glyster - or thro' the pores of the body.

If the excitement of inflamm<sup>y</sup> diathesis  
by ~~it~~ or by inflaming a wound  
appears to be the remedy ~~that~~ of this disease,  
as in the tetanus - would it not be proper  
to excite it by the Actual Caustery applied  
to a part of the body most connected w<sup>th</sup>:

the whole system? That this is the case  
relate the fact from Dr. Matthews. - +

I think I am not mistaken in  
the principles of the Hydrophobia & I cannot  
help thinking that we shall never treat  
it successfully till we apply to it in the

most extensive manner all the remedies  
and perhaps all the principles of the  
~~of~~ Tetanus. -

## Frenzy

They are a tendency to palsy. ~~Great Suffering~~  
~~= to be as hard~~

Their exciting causes are 1 Strong Drink  
2 Suffering, <sup>3 Lead. 4 frights 5</sup> ~~also most of~~ Old age. They  
begin in the hand, and extend to the  
neck and tongue.

Their cure consists in avoid-  
ing all their exciting causes (all excepted)  
and in depleting or tonic Remedies ac-  
cording to the state of the System.

---

V Chiefly from the sudden impression  
of the causes of frenzy, they particularly  
the small pox.

✓

Convulsion

an irregular

"clonic contractions of the muscles without  
 "sleep". They occur from various causes, but V  
 Its predisposing cause is debility.

Its proximate cause is ~~to~~ except <sup>the</sup> ~~deficiency~~ of  
 action - ~~from~~ the exciting causes <sup>are</sup> of pain -  
<sup>hemorrhage</sup> -  
 terror - acid matters - in the stomach - plethora -  
 and all the other causes of fever.

Convulsion is by

The cause the same as tetanus &c - where  
<sup>vicious</sup> ~~great excess~~ of action takes place indicated by  
 strength <sup>& violence</sup> ~~of~~ of convulsion - V.S. necessary  
 - also cold air - my chief remedy in fits  
 in children in the small boy - ~~from~~ <sup>ways</sup> ~~before~~  
 eruption from <sup>violent</sup> ~~excess~~ of action. <sup>Pediluvium</sup> ~~is~~  
 here improper - Cold Bath Applied for  
 3 or 4 hours I have no doubt would be  
 effectual - but difficult or impracticable  
 to be applied. - ~~After~~ Opium is a univer-  
 sal remedy in this disorder, but it should

+ see also a case of death from 9<sup>th</sup> XX  
of London after the exertion? of the  
system had been raised by a vomit  
from Dr. Adamson in the Medical  
 essays of Edin<sup>2</sup> -

424 violent action has  
be given only before ~~cause~~ has taken  
place, or after it has ceased - I have often  
prevented convulsions, ~~by it~~ - as well as  
cured them by it - But great care necessary  
not to give it near the time ~~is~~ in w<sup>ch</sup>  
~~violent~~ ~~crisis~~ of action is to be expected. Illustrated  
by the case of Son: Meredith's man. +

A Disposition to Convulsions in Child<sup>ren</sup>  
should be prevented by tonic remedies. Many  
children never have a fever, or even cut a  
tooth without them. Convulsions from these  
causes sweep away by time. They seldom  
continue beyond the 6<sup>th</sup> year. Miss West's  
case.

one Convulsions in the beginning of fevers  
seldom fatal - have never known but two  
even in the small pox + where they occur  
most frequently - But are generally fatal

✓ use. V.S. cold Air - cold water -  
+ injections. In pregnant women the  
V.S. should be very copious. Death  
has often been prevented by it.

→ Read Dr Jardine's letter.

+ It affects young persons under puberty  
chiefly. I have once seen it in a woman  
of 71 in whom it proved fatal, After three  
weeks suffering. The Digitalis for a while  
gave some relief. —

in the close of all diseases. The reason is obvious. In the first ~~crisp~~ <sup>in</sup> the last increased ~~great~~ <sup>the</sup> debility, in defect of action take place.

They occur likewise ~~I have observed~~ <sup>I often</sup> convulsions in pregnant women, ~~generally to prove~~ <sup>generally to prove</sup> fatal, espec. near delivery - ~~perhaps~~ <sup>I believe</sup> always from the want of bleeding ~~to cold air~~ - for I believe they generally arise from ~~escape of~~ <sup>great morbid</sup> action. ✓

Convulsions from hemorrhage ~~often~~ <sup>often</sup> ~~are~~ <sup>are</sup> fatal - I have seen a case of recovery where hemorrhage has cont. several days.

Chorea [to be brot in p. 439. Vol. 10.]

<sup>& tedious</sup> "Convulsive motions in ~~this~~ young persons of both sexes between <sup>the</sup> ages of 10 & 14 - chiefly affecting the left arm of one side - attended w. a dragging (sometimes) of one leg in walking."

See Dr Cullen's Description of it taken

from Sydenham: - Cause - debility - ~~excess~~ <sup>excess</sup> or debility of action - from stimulus - perhaps worms. +

Oil of amber is excellent in this  
all other convulsive diseases After  
depletion - cold air & gentle exercise  
are proper. It generally yields to  
these remedies.

Hiccups *reps: 464*

[From Loughing & drinking - ~~caused~~  
increasing by a stimulating  
1 The excitement of a strong passion, or  
the lifting it by a sedative passion.  
Joy - terror - & fear all effectual - the  
last to preferred. 2 Opium. 3 Oil  
of amber.

Cure.

Dr Sydenham recommends bleedings - ~~But~~ <sup>in the</sup>  
<sup>first stage of this disease.</sup>  
~~believe it is seldom necessary.~~ I have seen it <sup>several</sup> ~~times~~ <sup>times</sup>. I have seen chalybeates given w<sup>th</sup> success,  
 but if nothing were given it would proba-  
 bly go off of itself - at the change <sup>which</sup> takes place  
 in the system at puberty. I ally the same case  
 twice in grown people - local in Beunet  
 the Schoolmaster. Cramps [among local diseases]

"A violent extension, or contraction of the  
 fingers & hands or legs, of short duration, &  
 accompanied with great pain." - Mr Brent's  
 case - occurs in going to sleep - goes in <sup>in</sup> form  
 predisposing cause - debility - hence it oc-  
 curs in swimming - sleep - & especially in pregnancy.  
 - It would seem as if it was produced <sup>by mere</sup> mechanically  
~~excessive~~ relaxation from a want of tension or  
 full in the muscle.

Cure

1 Rising out of bed, or pressing the foot  
 against a board. 2 frictions. 3 tight ligature  
 at going to bed <sup>above</sup> the knee. fills the blood vessels  
 & prevents relaxation. 4 squeezing rolls of sulphur. -

D. Iohannes Crato, the greatest man of  
the age in which he lived, & Physician  
to 3 successive Emperors earnestly desired  
that he might live till he should ~~live to~~  
~~hear~~ hear of a satisfactory theory of the  
Epilepsy. He died without being <sup>+</sup>  
<sup>✓</sup> ~~occurred~~ in public assemblies, and <sup>because</sup> ~~from~~  
its <sup>was</sup> ~~being~~ supposed to be inflicted by the  
hand of heaven. — O

+ gratified in his benevolent wish,  
but had he lived to this time, he w<sup>d</sup>.  
<sup>have</sup> not been happier in the attainment  
of the Object of his wishes that when he  
died. I have thought much upon it, but  
I am sorry to say I know but little more of it.  
~~# I shall not however shrink from~~  
~~an attempt~~ nature than I did 30 years  
ago. All I shall attempt is to give you  
a detail of facts relative to this dreadful  
Disease. In some fortunate moment, at  
a future day you may combine these  
facts into a theory which shall lead to  
a successful mode of treating it: "Dies docet,"

227  
Epilepsy

"A Convulsion of the muscles of the body with sleep"

~~It was~~ <sup>It was</sup> ~~called~~ <sup>called</sup> morbus Convulsivus, & morbus Sacer by the Ancients, because it often

~~I enter upon this disease with reluctance. Having nothing to offer upon it as yet which can lead to a more successful mode of treating it. I have that much upon it, but know as little <sup>more</sup> of the ~~disease~~ <sup>truth</sup> of curing it as I did 20 years ago.~~ I have often wished that a number

of physicians w<sup>d</sup> associate & divide among them all the diseases y<sup>t</sup> now elude our Art. If the reading - Observations - & experiments of <sup>the</sup> ~~any~~ <sup>physician</sup> was confined for 15 or 20 years to

One disease - there is no <sup>knowing</sup> ~~ascertaining~~ what immense advantages would arise from it to the interests of Science & Humanity. For the sake of discovering further cures for Diseases

If I am not able to ~~teach~~ <sup>to cure</sup> you ~~a new~~  
~~or more successful mode of curing~~ this disease, I  
shall give you a new theory of it. Perhaps this  
may finally lead to a more successful mode of  
treating it. There is a great analogy between  
the diseases of the Arterial, & nervous system.  
Hydrophobia &  
The tetanus & ~~Hydrophobia~~ <sup>correspond</sup> with the  
plague and yellow fever,  
~~Phlegmonous~~ ~~tetanus~~ ~~and~~ ~~phlegmonous~~ as being diseases  
of the greatest exaltation of action. Between these  
high inflamm: fevers, & the typhus or lowest  
degree of fever - we marked an intermediate  
degree of fever - called by Dr Lullen Typhoid & by Dr B.  
fever from Asthenia in inflamm: - It occurs in  
the <sup>slow chronic</sup> ~~fever~~ - in the diphtheria - & in the  
puerperal fever. Now I conceive the Epilepsy ~~here~~  
holds the same rank in Nerv. diseases that the  
fevers I have named hold among fevers. If

Now deemed incurable, I have frequently  
 wished further that our Legislatures would  
 offer bounties either ~~in cash~~ for the discovery  
 of cures for them. Such encouragement for  
 genius & industry would soon ~~find~~ <sup>open</sup> the  
 number of incurable diseases, and do <sup>great</sup> ~~infinite~~  
~~by means~~ honor to our governments. But  
 such acts of enlightened reason & benevolence  
<sup>to be</sup> while medical knowledge  
 are not expected ~~in a life, or in a country~~  
 is confined only to Physicians, and while the  
~~in which military institutions are considered~~  
 as training of evil only is considered  
~~as~~ as the principal & most important  
 business of legislation. [Roman laws appear  
 to have for their Objects - the <sup>Destruction</sup> ~~extermination~~ of the  
~~life of man~~ <sup>& not the</sup> preservation of <sup>the life</sup> ~~it~~  
 of man.

The Epilepsy like all other general  
 diseases, depends upon debility.  
 Its proximate cause is ~~an excess~~, or def.  
 of Action.

Infer this from the persons it affects - They are neither - the very robust - nor the very weakly people - Country Children as much affected with it as city Children - Not unknown among the Creek Indians who have been connected with the Americans - Labouring men - Sailors - Soldiers - & literary men all subject to it. It was the ~~the~~ disease that stamped not only humanity but imbecility upon Julius Caesar.

2 It infer it from its symptoms. <sup>The symptoms</sup> - They are not so violent as in tetanus - <sup>& the debility</sup> but more so of which follows, less than after apoplexy & palsy.

3 ~~The~~ From the perfect state of health which ~~interferes~~ appears in the interval of each fit. & 4 From the inefficacy of <sup>certain</sup> ~~some~~ med<sup>s</sup> in curing it, & the efficacy of others in relieving it. From these Observations I am disposed to place the proximate cause, in a mixture of <sup>strong</sup> ~~acute~~ & <sup>weak</sup> ~~deficient~~ action in

Its predisposing causes are great excitability of the system produced by hereditary, or congenial diathesis — by a morbid state of the brain from fractures — Davi Potts's case exostoses — small conformation — effusions of blood by intemperance in eating or drinking water — pus — or the like — by great heat — exercise — imagination —

Or great exercise of the Understanding — passions & lying in open air afterwards —

— or the appetite of Venus — more especially by sudden frights — two from Shipwrecks — in Onanism — by violent pains — imitations — one from seeing the Effigy of Gen<sup>l</sup> Arnold & the Devil carried — retention of acid matters — as natural ~~and~~ this the story of Phil<sup>d</sup> Rich<sup>d</sup> Topoliff —

usual evacuations as lochia — menses &c or by hemorrhages — especially poisons — pus — by acid matters introduced into the

system either by eating or smelling — ~~by~~ <sup>by repelled</sup> eruptions — or tumor by a disease in a particular part from whence it is called the Aura Epileptica & lastly

by Plethora. In all the cases of predisposition that have been mentioned, there is evident de-

bility — & ~~not~~ hence the excitab<sup>l</sup> of the system. This debility is not less evident in Plethora — than in the Others, but the excitab<sup>l</sup> is more evident.

the nervous system.

[V I have attempted to discover the Precursors of this disease, & have met with the following.

1 a Bitter taste in the mouth two or three Days before a fitt. 2 an enlargement of the pupil just before the fitt. 3 Tremors & false Vision. By 4 a throbbing pulse. 5 partial loss of the power of sight - as in Mrs. Wright. Attending to the first I have prevented a fitt of Epilepsy in One instance. I advised a pulse on Lig: Land: according to the state of the pulse. He took a pulse. - Mrs. Wood had had only no previous cure - & mine now prepared - its ~~last~~ dose - & to whom useful.]

= by Sulphur a day or two before the fitt.

I have prevented it by ~~of~~ in Mrs. Nicholas's case a few days ago. Jan<sup>y</sup> 3. 1791. He had headache only instead of a fitt.

Remedies ✓

The usual remedies for this disorder are Stimulants. These are ~~artificial~~ - vegetable, & metallic - the vegetable are Vinifolios - taken from the Oak tree, & Bark, from neither of which have I ever seen any benefit. The metallics are Iron - Copper - & Zinc - The Copper in the form of Cuprum Ammoniacum has & Zinc have both service - The only reason, - because they were such mild ~~and~~ Stimulants, & so well accommodated to the enraged state of Action in the system. - The other remedies, are 2 Issues or setons - These are highly useful by obviating plethoria.

3 Salivation - Dr Smith's Success in London - acts by promoting general tone - as in Tetanus & Hydrophobia. - 4 Cold Bath - I have never seen it do any service - perhaps too stimulating.

5 Change of Climate - suspended it 2 years in Mr Potts, & cured Geo. Meade. - Its by altering

+ The *Anura Epileptica* - described - cured by  
canotic, or issue to the part from whence  
it rises. -

the action of the air on the system, so as to  
 make it more stimulating <sup>or</sup> sedative, or by  
 destroying habit & appropriation of ideas. Dr Helmholtz  
 story - ~~or both~~. 6 low diet - or 7 full diet. Alex<sup>r</sup> Case.  
 & avoiding all its occasional & exciting causes & cold feet  
 I know of but a few radical cures - & these

were by nature. 1 By change of the Constitution  
 at 14, or ~~35~~ 35 - to 40 - or 2 by bearing Child<sup>2</sup>.  
 I have known two cases of its efficacy. 3: By  
 a hard life - Julius Caesar cured by mil<sup>y</sup> life - <sup>or horrors</sup>  
 The fits may be suspended 1 by fear Dr  
 & Dr. Folio's Daughter.  
 Cullen's fact. 2 by Volition - 3 by opium. +

As nerv<sup>?</sup> fever is seldom cured till  
 inflam<sup>y</sup> action is perfectly subdued, it usually  
 happens ab: the 14<sup>th</sup> day - what would be  
 the effect of perfectly overcoming exc<sup>?</sup> of action  
 before we use the stimulating remedies?  
<sup>or tone</sup>

Is vs. proper? Sometimes it is - see  
 Dr Brown's fact. f

✓ I adopt the term Hysteria in conformity  
to custom. It is a form of disease confined  
chiefly to the nervous system & alimentary  
canal. I know of no difference between  
the morbid actions which take place in  
it is called Hysteria, & it in what is called  
Goit. They are both the result of the  
same remote predisposing, & exciting  
causes. <sup>There is no more reason to call</sup> ~~perhaps it would be~~ <sup>by a specific name</sup> ~~termed~~ <sup>Hysteria</sup> than  
there is to call & name by different  
names when they occupy different viscera.  
I said formerly that women are  
more subject to Goit than men. The  
frequency of this ~~dis~~ Hysteria &  
its numerous symptoms abundantly  
prove this to be the case. It is Goit  
not, in broad cloth as it appears

Hysteria

"Rumbling noise in the belly - a sense of a  
 globe revolving in the abdomen towards the  
 stomach & fauces - a sense of strangulation -  
 Sleep inops - Convulsions - pale urine in large  
 quantities - with fishbleness of mind", or as  
 Dr Sydenham expresses it "Constant only  
 in inconstancy". <sup>Bowels feel first impression</sup> It composes (he says)  $1/2$   
 of the  $1/3$  of diseases which are left by the  $2/3$  fevers. <sup>cases</sup>  
 of remote causes. It has been called a protens of diseases,  
 resembling all the chronic diseases of the  
 human body. It appears in the form of Epip-  
 -sphy - Hemiplegia - Epilepsy - colic - Colera  
 morbus - <sup>Angina -</sup> Cough - Dyspnoea - palpitation  
 of heart - cholera morbus - Dyspepsy (tho' seldom)  
 - Swellings of the face - arms & legs - the  
 latter greatest in morning, & does not quit  
 as in the dropsy - Ischuria & Salivation -  
 Lumbago - Headache - <sup>instead of</sup> ~~swellings~~ of the extremities

in men, but in the ~~the~~ more loose &  
flowing Drefs of <sup>fine</sup> muslin and Tiffany. The  
Symptoms of Hysteria are

2  
The
